MONUMENT

Monument is a collection of shelving units that combines wood and marble. This piece was imagined by Mathieu Girard and Gauthier Pouillart of Atelier Cocorico.

The visual strength and stability of Monument relies on an ingenious construction system that does not require any tool. The result is a brutalist, material centered piece with a strong sculptural presence.

The two imposing "cross" columns that constitute the superstructure are the visual signature of the shelf, but also present and enhance beautiful objects or books. The Monument system comes in a large variety of dimensions and it is possible to make mono material shelves or combine marble and wood.

THE DESIGNERS

Mathieu Girard and Gauthier Pouillart both graduated of the Ecole Bleue in Paris in 2010 and 2011, a multidisciplinary training about the fields of design.

They founded Cocorico Paris at the end of 2011. This design agency appreciates contemporary challenges, and develops unique stories for several companies in many fields of action, like hospitality, offices, coworking, restaurant or shopping facilities. Due to its global design concepts, Cocorico Paris deals with creation, interior design, graphic design, etc.

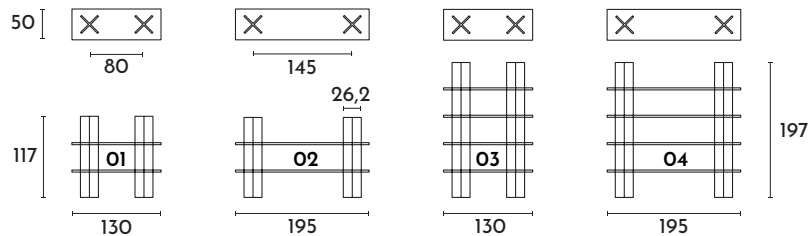

Cocorico Paris design can be resumed by simplicity, originality and ingenuity.

BE CAREFUL

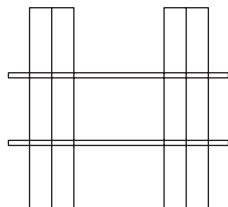

- The marbre is a fragile material.
Be careful not hit the pieces.
- Do not move the shelves in one piece.
- At least 2 people needed to assemble the shelf.
- For a shelf with more than two boards, we recommend to install it next to a wall and use the securing steel L-shapes, in order to avoid tilting.

SECURING

For the high versions of Monument, we recommend to place it next to a wall and secure it with the brackets included to avoid tilting.

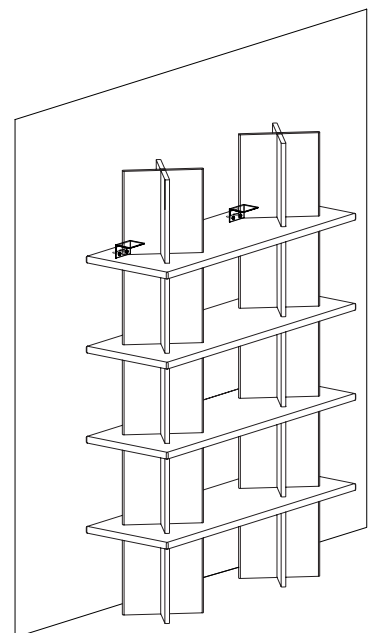

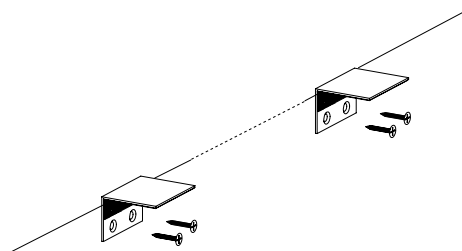

1. Slide the brackets between the wall and the last horizontal board.

2. Screw the brackets to the wall and align Monument so there is no space between the parts.

3. There is no need to drill in the board as the top parts of the brackets are locking the shelf.
